Fluoxetine Capsules and Tablets
PRONUNCIATION (floo OKS ee ten)

BRAND NAME(S): Prozac

WARNING Drugs like this one have raised the chance of suicidal thoughts or actions in children and young adults. The risk may be greater in people who have had these thoughts or actions in the past. All people who take this drug need to be watched closely. Call the doctor right away if signs like depression, nervousness, restlessness, grouchy, panic attacks, or changes in mood or actions are new or worse. Call the doctor right away if any thoughts or actions of suicide occur. This drug is not approved for use in all children. Talk with the doctor to be sure that this drug is right for your child.

WHAT IS THIS DRUG USED FOR? It is used to treat depression. It is used to treat obsessive-compulsive problems. It is used to treat eating problems. It is used to treat panic attacks. It may be given to you for other reasons. Talk with the doctor.

WHAT DO I NEED TO TELL MY DOCTOR BEFORE I TAKE THIS DRUG? If you are allergic to this drug; any part of this drug; or any other drugs, foods, or substances. Tell your doctor about the allergy and what signs you had. If you are taking any of these drugs: Linezolid, methylene blue, pimozide, or thioridazine. If you have taken certain drugs for depression or Parkinson's disease in the last 14 days. This includes isocarboxazid, phenelzine, tranylcypromine, selegiline, or rasagiline. Very high blood pressure may happen. If you are taking any drugs that can cause a certain type of heartbeat that is not normal (prolonged QT interval). There are many drugs that can do this. Ask your doctor or pharmacist if you are not sure. This is not a list of all drugs or health problems that interact with this drug. Tell your doctor and pharmacist about all of your drugs (prescription or OTC, natural products, vitamins) and health problems. You must check to make sure that it is safe for you to take this drug with all of your drugs and health problems. Do not start, stop, or change the dose of any drug without checking with your doctor.

WHAT ARE SOME THINGS I NEED TO KNOW OR DO WHILE I TAKE THIS DRUG? Tell all of your health care providers that you take this drug. This includes your doctors, nurses, pharmacists, and dentists. Avoid driving and doing other tasks or actions that call for you to be alert until you see how this drug affects you. Do not stop taking this drug all of a sudden without calling your doctor. You may have a greater risk of side effects. If you need to stop this drug, you will want to slowly stop it as ordered by your doctor. Avoid drinking alcohol while taking this drug. Talk with your doctor before you use marijuana, other forms of cannabis, or prescription or OTC drugs that may slow your actions. If you have high blood sugar (diabetes), you will need to watch your blood sugar closely. It may take several weeks to see the full effects. This drug may raise the chance of bleeding. Sometimes, bleeding can be life-threatening. Talk with the doctor. Severe and sometimes deadly reactions along with a rash have rarely happened with this drug. Lung, kidney, or liver problems have also happened. Call your doctor right away if you have a change in the amount of urine passed, dark urine, decreased appetite, upset stomach or stomach pain, light-colored stools, throwing up, yellow skin or eyes, or shortness of breath. Some people may have a higher chance of eye problems with this drug. Your doctor may want you to have an eye exam to see if you have a higher chance of these eye problems. Call your doctor right away if you have eye pain, change in eyesight, or swelling or redness in or around the eye. This drug can cause low sodium levels. Very low sodium levels can be life-threatening, leading to seizures, passing out, trouble breathing, or death. This drug may affect growth in children and teens in some cases. They may need regular growth checks. Talk with the doctor. If you are 65 or older, use this drug with care. You could have more side effects. Tell your doctor if you are pregnant, plan on getting pregnant, or are breast-feeding. You will need to talk about the benefits and risks to you and the baby. Taking this drug in the third trimester of pregnancy may lead to some health problems in the newborn. Talk with the doctor.

WHAT ARE SOME SIDE EFFECTS THAT I NEED TO CALL MY DOCTOR ABOUT RIGHT AWAY? WARNING/CAUTION: Even though it may be rare, some people may have very bad and sometimes deadly side effects when taking a drug. Tell your doctor or get medical help right away if you have any of the following signs or symptoms that may be related to a very bad side effect: Signs of an allergic reaction, like rash; hives; itching; red, swollen, blistered, or peeling skin with or without fever; wheezing; tightness in the chest or throat; trouble breathing, swallowing, or talking; unusual hoarseness; or swelling of the mouth, face, lips, tongue, or throat. Signs of low sodium levels like headache, trouble breathing, swallowing, or talking; feeling confused, weakness, seizures, or change in balance; A big weight gain or loss; Seizures; Dizziness; Slow heartbeat; Any unexplained bruising or bleeding; Anxiety; Unusual thirst; Period (menstrual) changes; Passing urine more often; Trouble controlling body movements; Joint pain; Swollen gland; Painful erection (hard penis) or an erection that lasts for longer than 4 hours; Sex problems have happened with drugs like this one. This includes lowered interest in sex, trouble having an orgasm, ejaculation problems, or trouble getting or keeping an erection. If you have any sex problems or if

Bupropion Extended-Release Tablets
PRONUNCIATION (byoo PROE pee on)

BRAND NAME(S): Aplenzin, Budeprion XL, Forfivo XL, and Wellbutrin XL

WARNING Drugs like this one have raised the chance of suicidal thoughts or actions in children and young adults. The risk may be greater in people who have had these thoughts or actions in the past. All people who take this drug need to be watched closely. Call the doctor right away if signs like depression, nervousness, restlessness, grouching, panic attacks, or changes in mood or actions are new or worse. Call the doctor right away if any thoughts or actions of suicide occur.

WHAT IS THIS DRUG USED FOR? It is used to treat depression. It is used to prevent seasonal affective disorder (SAD). It may be given to you for other reasons. Talk with the doctor.

WHAT DO I NEED TO TELL MY DOCTOR BEFORE I TAKE THIS DRUG? If you are allergic to this drug; any part of this drug; or any other drugs, foods, or substances. Tell your doctor about the allergy and what signs you had. If you have ever had seizures. If you drink a lot of alcohol and you stop drinking all of a sudden. If you use certain other drugs like drugs for seizures or anxiety and you stop using them all of a sudden. If you have ever had an eating problem like anorexia or bulimia. If you have any of these health problems: Kidney disease or liver disease. If you have taken certain drugs for depression or Parkinson's disease in the last 14 days. This includes isocarboxazid, phenelzine, tranylcypromine, selegiline, or rasagiline. Very high blood pressure may happen. If you are taking any of these drugs: Linezolid or methylene blue. If you are taking another drug that has the same drug in it. This is not a list of all drugs or health problems that interact with this drug. Tell your doctor and pharmacist about all of your drugs (prescription or OTC, natural products, vitamins) and health problems. You must check to make sure that it is safe for you to take this drug with all of your drugs and health problems. Do not start, stop, or change the dose of any drug without checking with your doctor.

WHAT ARE SOME THINGS I NEED TO KNOW OR DO WHILE I TAKE THIS DRUG? For all patients taking this drug: Tell all of your health care providers that you take this drug. This includes your doctors, nurses, pharmacists, and dentists. Avoid driving and doing other tasks or actions that call for you to be alert or have clear eyesight until you see how this drug affects you. This drug may affect certain lab tests. Tell all of your health care providers and lab workers that you take this drug. Do not stop taking this drug all of a sudden without calling your doctor. You may have a greater risk of side effects. If you need to stop this drug, you will want to slowly stop it as ordered by your doctor. High blood pressure has happened with this drug. Have your blood pressure checked as you have been told by your doctor. This drug may raise the chance of seizures. The risk may be higher in people who take higher doses, have certain health problems, or take certain other drugs. People who suddenly stop drinking a lot of alcohol or suddenly stop taking certain drugs (like drugs used for anxiety, sleep, or seizures) may also have a higher risk. Talk to your doctor to see if you have a greater chance of seizures. Avoid drinking alcohol while taking this drug. Talk with your doctor before you use marijuana, other forms of cannabis, or prescription or OTC drugs that may slow your actions. It may take several weeks to see the full effects. This drug is not approved for use in children. Talk with the doctor. If you are 65 or older, use this drug with care. You could have more side effects. Tell your doctor if you are pregnant, plan on getting pregnant, or are breast-feeding. You will need to talk about the benefits and risks to you and the baby. If you smoke: Not all products are approved for use to help stop smoking. Talk with the doctor to make sure that you have the right product. New or worse mental, mood, or behavior problems have happened when bupropion has been used to stop smoking. These problems include thoughts of suicide or murder, depression, forceful actions, fury, anxiety, and anger. These problems have happened in people with and without a history of mental or mood problems. Talk with the doctor.

WHAT ARE SOME SIDE EFFECTS THAT I NEED TO CALL MY DOCTOR ABOUT RIGHT AWAY? WARNING/CAUTION: Even though it may be rare, some people may have very bad and sometimes deadly side effects when taking a drug. Tell your doctor or get medical help right away if you have any of the following signs or symptoms that may be related to a very bad side effect: Signs of an allergic reaction, like rash; hives; itching; red, swollen, blistered, or peeling skin with or without fever; wheezing; tightness in the chest or throat; trouble breathing, swallowing, or talking; unusual hoarseness; or swelling of the mouth, face, lips, tongue, or throat. Signs of high blood pressure like very bad headache or dizziness, passing out, or change in eyesight. Feeling confused, not able to focus, or change in behavior. Hallucinations (seeing or hearing things that are not there). If seizures are new or worse after starting this drug. Chest pain or pressure, a fast heartbeat, or an abnormal heartbeat. Swelling. Shortness of breath. Change in hearing. Ringing in ears. Passing urine more often. Swollen gland. Trouble moving around. Some people may have a higher chance of eye problems with this drug. Your doctor may want you to have an eye exam to see if you have a higher chance of these eye problems. Call your doctor right away if you
